Flexx Monitor Roll Stand

Especially in operating theaters and treatment rooms, many displays are used for a variety of applications, such as patient monitoring, displays for performing endoscopic examinations and procedures, overview screens, viewing monitors, etc.

The positioning of these displays depends on the type of intervention and the preferences of the doctor/surgeon and the assistants. Displays are sometimes present on pendants or are placed on mobile carts. For some procedures additional displays are required, or the already present monitors cannot be positioned properly. In these cases, the Flexx Monitor Roll Stand offers a good solution.

Unique specifications

The Flexx Monitor Roll Stand is a compact cart on which a display can be adjusted over a height of no less than **80cm**. Because the monitor is balanced with a gas spring, it is easy to adjust the height, and no locking is required. This monitor stand is also suitable for small and large screens and is very stable due to the low center of gravity. At the rear the roll stand has a storage compartment for power supply modules and there are strain reliefs for the video and power cables.

This roll stand is standard equipped with a VESA 75/100 monitor mount, with a double pivot. When required also different VESA sizes are available. Upon request a multi VESA mount can be manufactured to attach multiple screens.
